Hazardous Weather

Day 1 Weather Hazards

Valid: 0800 Fri - 0800 Sat

Marginal risk of severe
thunderstorms with gusty
winds/hail possible along with
areas of localized flash
flooding

-  Very Common – Happens Often
-  Common – Happens Frequently
-  Uncommon – A Few Times a Year
-  Rare – Once Every 1-5 Years
-  Very Rare – Once Every 5-10 Years

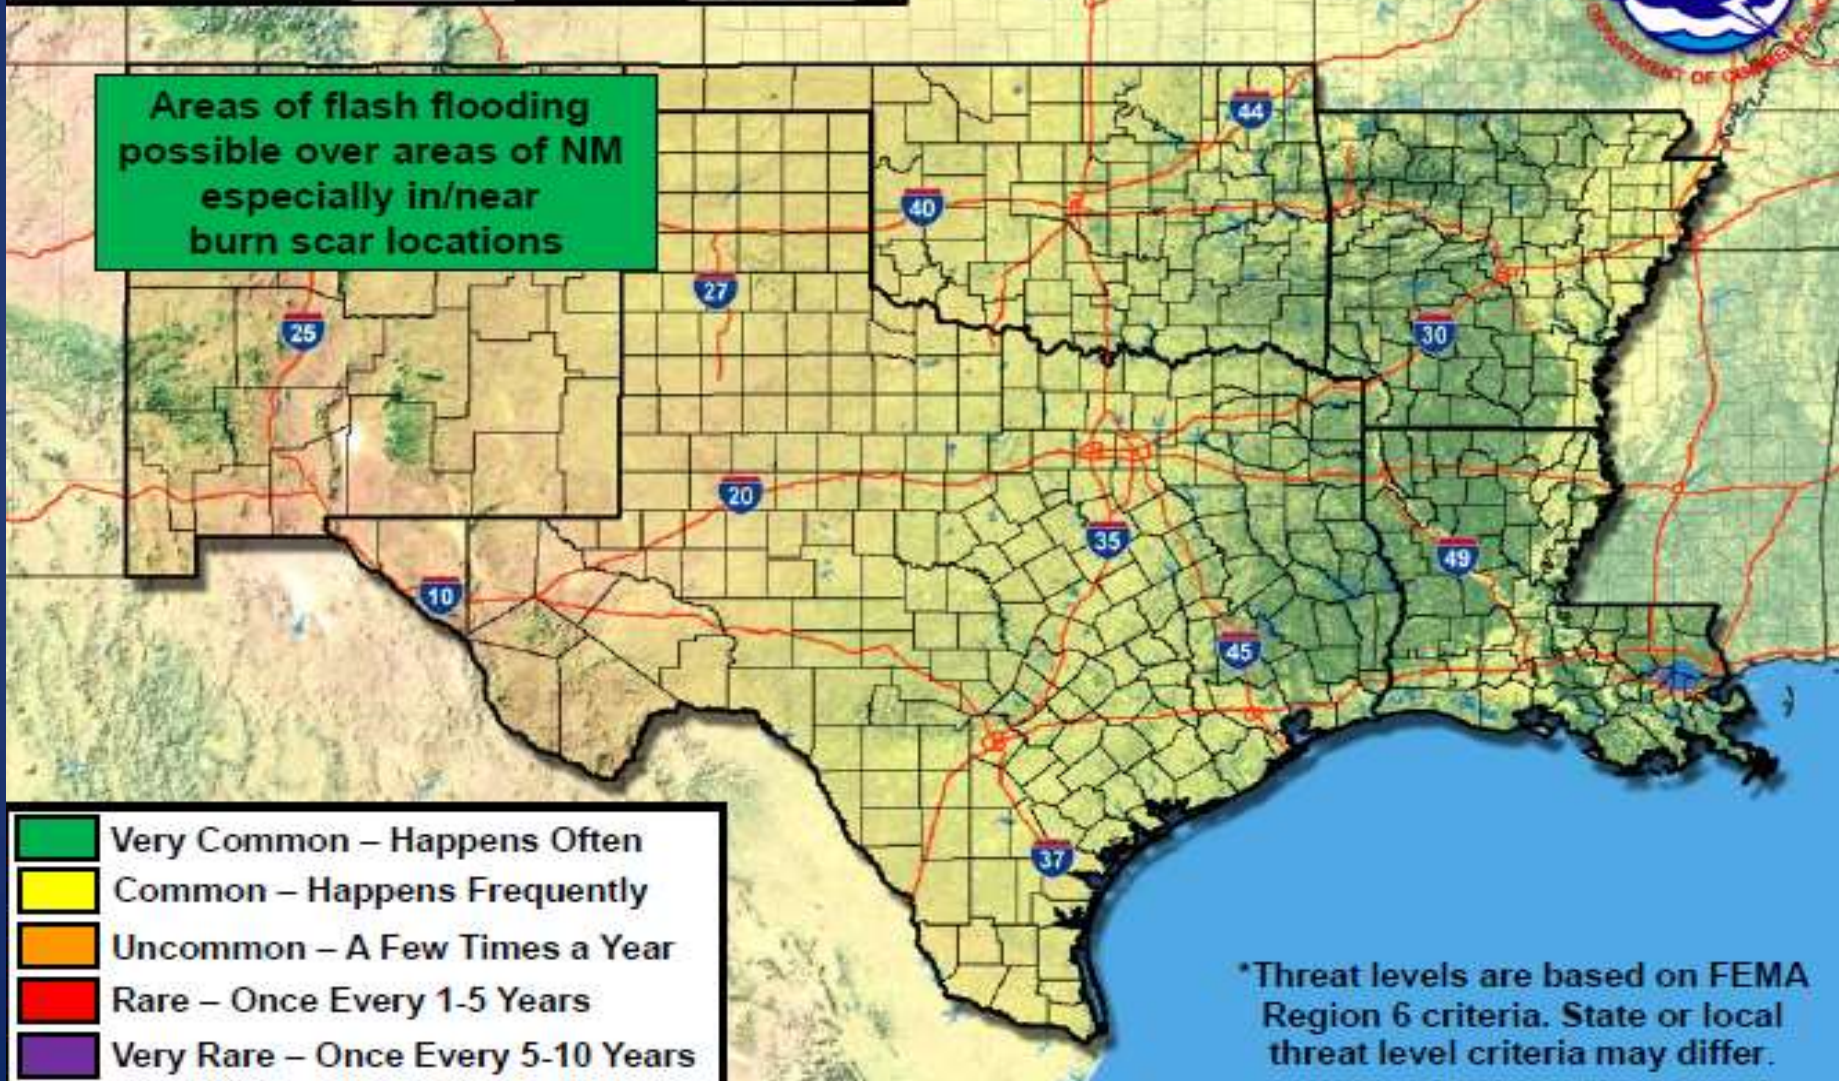

*Threat levels are based on FEMA
Region 6 criteria. State or local
threat level criteria may differ.

Hazardous Weather

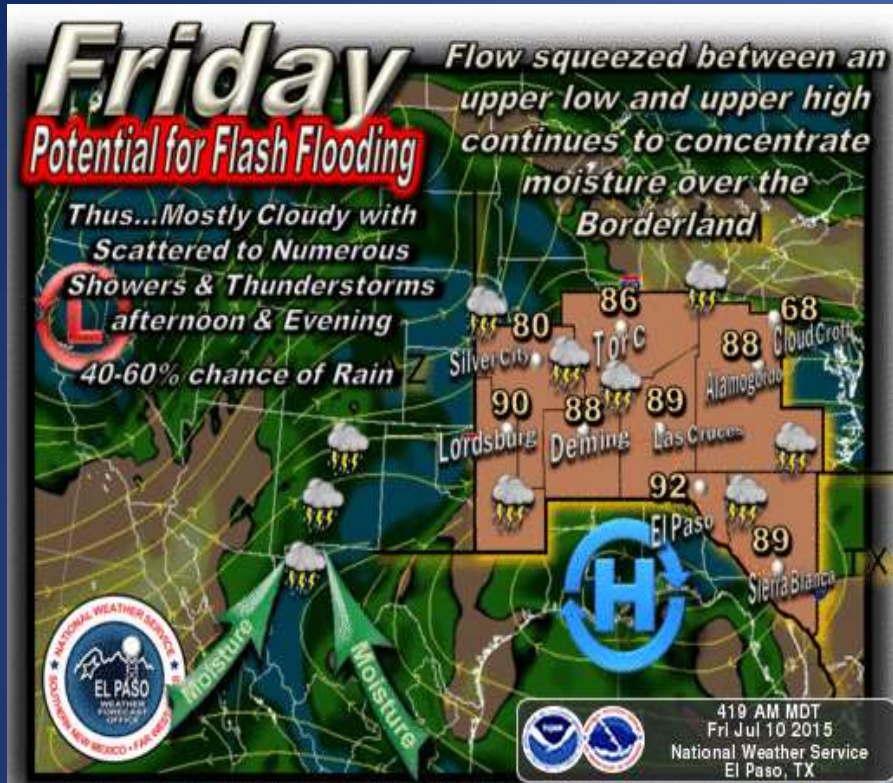

Day 2-3 Weather Hazards

Valid: 0800 Sat - 0800 Mon

Areas of flash flooding
possible over areas of NM
especially in/near
burn scar locations

Hazardous Weather

Moist unstable air will continue to flow into New Mexico and west Texas today and tonight resulting in more shower and thunderstorm activity across the region. A few storms may again produce heavy rains...hail and strong winds. Skies will be mostly cloudy with highs in the mid 80s to lower 90s lowlands with upper 60s to upper 70s mountains.

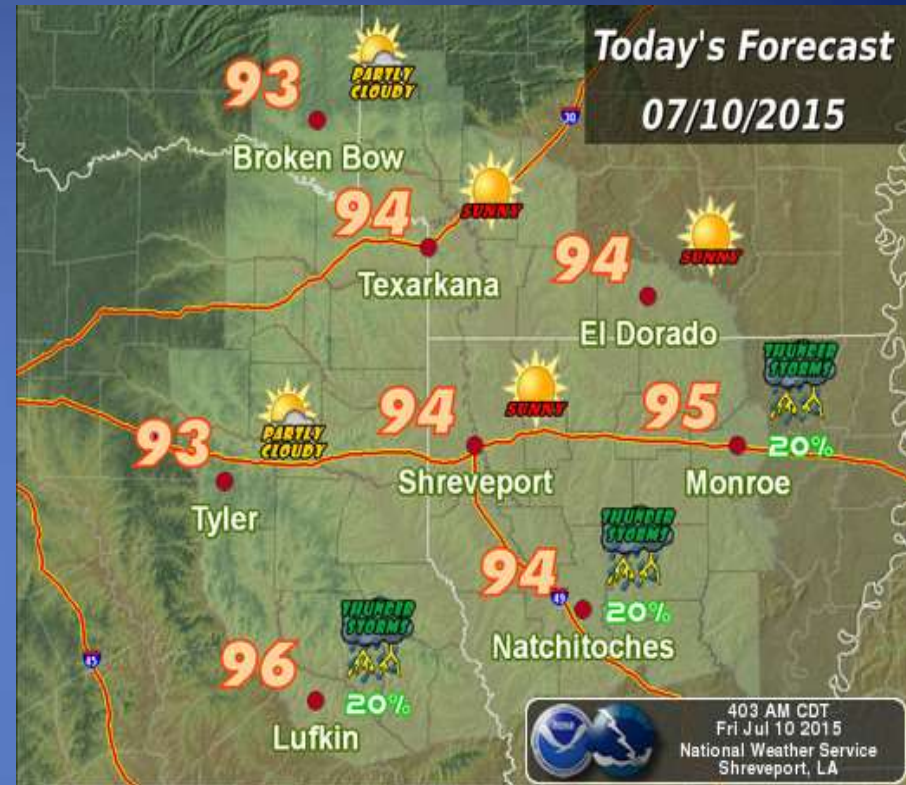

Highs today will be slightly below normal today but the heat is on the way this weekend and early next week when highs will reach the upper 90s to near 100. The highest rain chances will be in southeast New Mexico today, then will diminish tonight and tomorrow as an upper level ridge builds into the region.

Hazardous Weather

Isolated to scattered thunderstorms are expected. Some storms may be strong, with small hail and gusty winds as the primary hazards. Heavy rain will also be possible with the stronger storms, which could lead to areas of flooding or flash flooding.

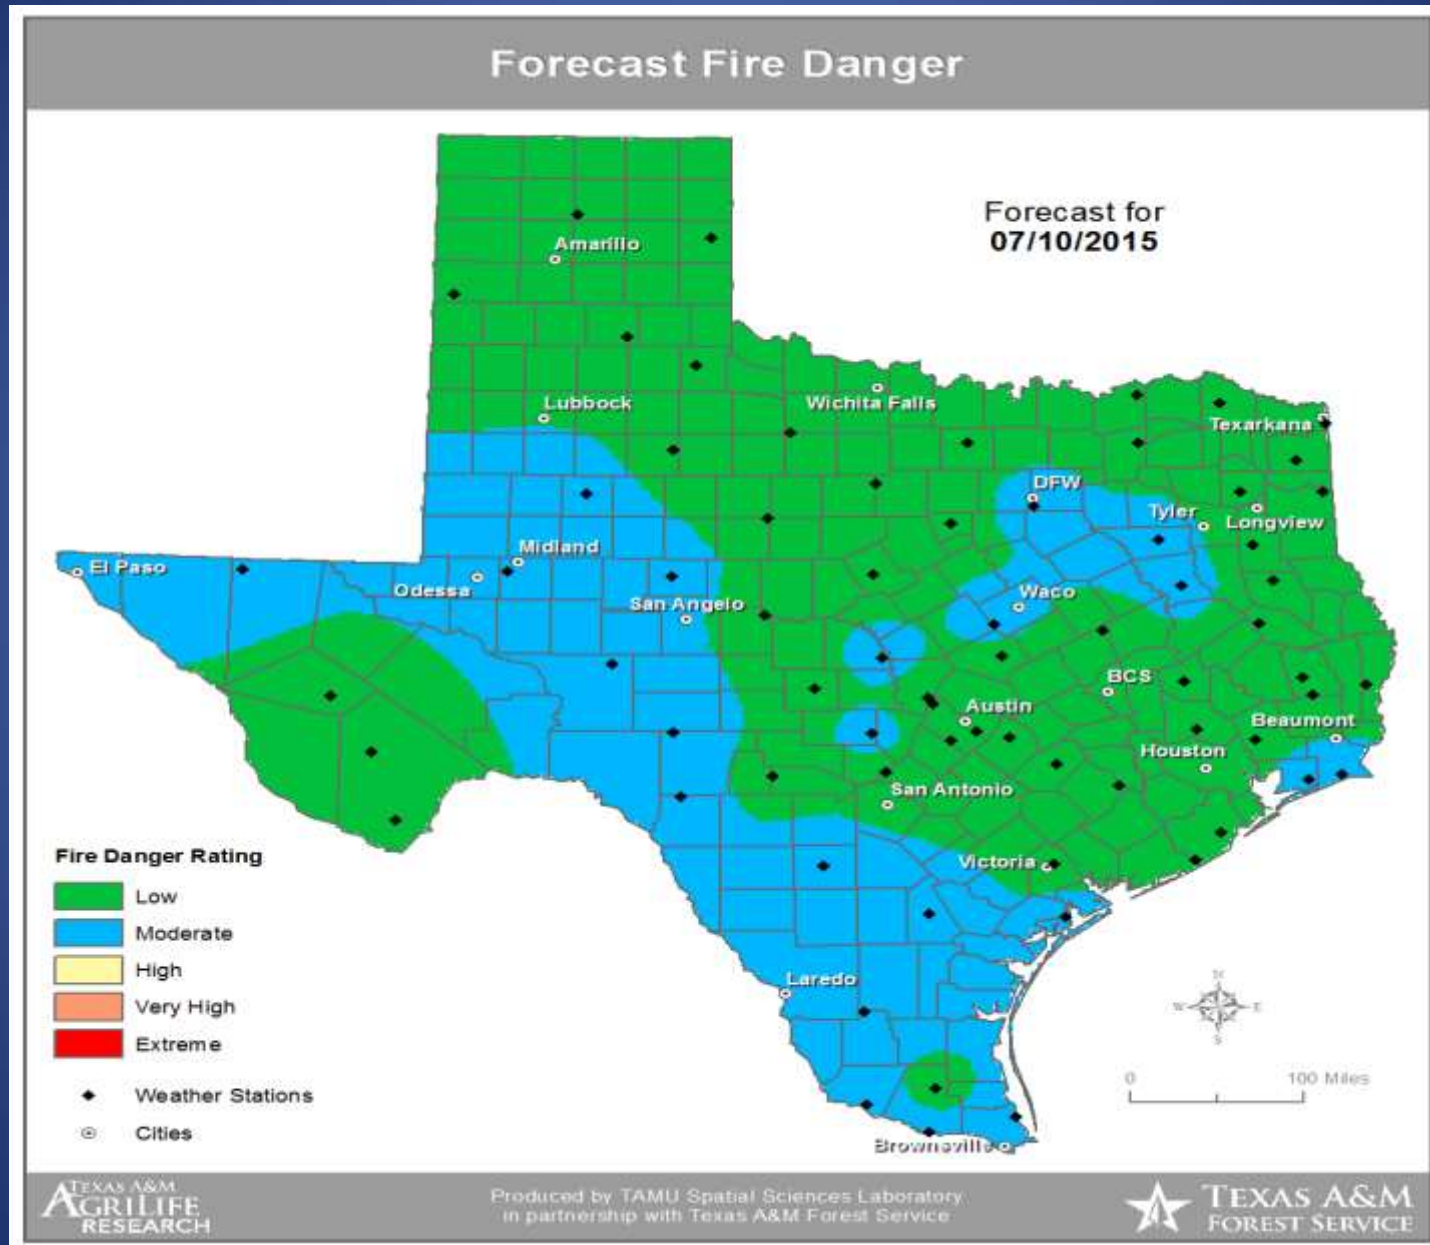

Weather Warning/Advisories Issued

DATE	WARNING TYPE	LOCATION
